

Troubleshooting: Windows

- If you are having trouble installing Docker on a Windows 10, ensure it is using Windows 10 Professional. Windows 10 Home requires install of the Docker Toolbox.
- If you experience trouble starting Che, ensure you are using Powershell instead of Mingw. Use syntax `/D/<path>` instead of `D:<path>`
- If you experience trouble starting the Docker VM, start Kitematic and choose “Use Virtualbox” instead of the default virtual environment.

Troubleshooting: Che

- If you experience trouble building Maven in Che after importing a project, make sure you are in the folder with the pom.xml file. You will likely need to cd to a lower level folder.
