Clone a project from GitHub

('web-java-spring' example)

Step 1: Clone GitHub project on local machine
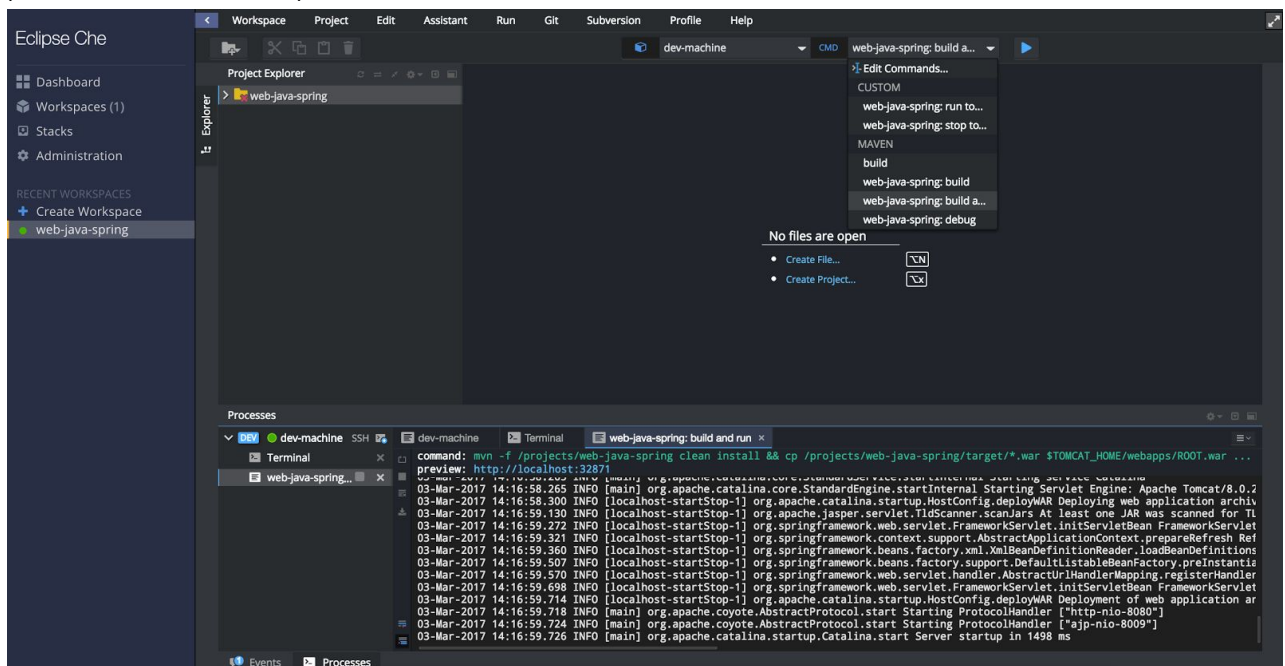

- Example project is at https://github.com/DevEnvy-HackWithFriends/web-java-spring
- Open Terminal/Powershell and clone the git project. Run the following command:
  - git clone https://github.com/DevEnvy-HackWithFriends/web-java-spring

## Step 2: Follow instructions in README.txt file

This file is in the root folder of web-java-spring.

Step 3: Configuration

- View new Che workspace at: localhost:8080/
- Run the web-java-spring example, use the "Build and run" option found in the dropdown (see screenshot below):
